## RESEARCH INTERESTS

My research interests lie in the intersection of *information theory* and *machine learning*. I have recently resorted to the tools from information theory to develop *theoretically justified* learning algorithms with applications to fair machine learning, model compression, and anomaly detection. More broadly, the primary goal of my research is to lay information-theoretic foundations for the learning algorithms with limited labeled data, including transfer learning and semi-supervised learning, particularly with fairness/privacy constraints.
